Leading the way to resilience in the animal health sector
World Veterinary Day 2022

Resilience has been a guiding principle of the World Organisation for Animal Health (OIE) throughout its nearly 100 years of existence. From emerging infections to the challenges posed by an increasingly globalised society, it has built a portfolio to support Veterinary Services in dealing with an ever-evolving world. This issue also looks at a Futures Literacy Laboratory, African swine fever, antimicrobial resistance and more!

## Destination 2040 - there and back through the OIE Futures Literacy Laboratory

COVID has not stopped our imaginations from travelling to possible futures. The Futures Literacy Laboratory asked participants to imagine themselves in the year 2040, where one of the possible realities was a world where humans are tamed by animals.
